

DaVita expands paid leave to support teammates choosing to be living organ donors

Company helps ease financial burden for living donors, encourages other employers to follow suit

DENVER, Feb. 14, 2022 /PRNewswire/ -- In honor of National Donor Day—and every living organ donor—[DaVita](#) announced it increased paid leave for organ donation to four consecutive weeks for benefits-eligible teammates (employees) who donate their bone marrow, liver or kidney.

The policy change is designed to ease worries about lost wages or using accrued paid time off for the procedure and recovery. For example, the usual hospital stay for a living kidney donor is four to six daysⁱ. Recovery continues at home with follow-up appointments and medications.

"Now is the time to unite and support the selfless, generous individuals in our communities who take courageous action and give the gift of life," said Dr. Jeff Giullian, chief medical officer for DaVita Kidney Care. "We're calling on fellow employers to join us in adopting this policy and help support thousands of Americans awaiting life-giving organ donations."

There were more than 41,000 transplants in the U.S. in 2021ⁱⁱ. Of those, approximately 6,500 were living donor transplants. Yet there are currently more than 106,000 candidates on a wait list for an organ transplant. Because the demand for organs continues to outpace the supply, living donations help more patients have access to transplants and help decrease time on the waitlist.

Last year DaVita and the National Kidney Foundation (NKF) launched a year-long pilot within [NKF's THE BIG ASK: THE BIG GIVE](#)® platform to help better support patients in finding a living donor, and help improve health equity in kidney transplantation.

DaVita and many others in the kidney care community have supported state and federal legislation to remove this and other barriers to living donation. Recently, the [Living Donor Protection Act](#) was introduced in Congress. Among other things, the bill, if adopted as drafted, would allow an individual to be a living donor without impacting their own insurance status.

"We must come together—patients, physicians, providers, advocates, policymakers, employers—and transform the U.S. transplant system for patients and donors," continued Dr. Giullian.

DaVita recently invested in several innovative companies aiming to transform the transplant experience for patients. In January, DaVita announced its [acquisition of MedSleuth](#), which makes software for transplant centers that supports greater connectivity among transplant candidates, physicians and care teams to help improve the experience and outcomes for kidney and liver transplant patients.

And in 2021, DaVita Venture Group announced investments in other transplant innovations that have the potential to transform care, including:

- A needle-free test to help determine if a [patient's body is rejecting a transplanted kidney](#)
- Technology for [bioengineering fully transplantable organs](#)
