

DaVita Clinical Research Showcases Chronic Kidney Disease and Rare Disease Network, Presents New Research Findings at Kidney Week 2022

This year's research centered on advancements in kidney transplantation and equity in patient care

DaVita addresses equitable access to breakthrough trials and decentralized research by introducing new Chronic Kidney Disease & Rare Disease Network

DENVER, Nov. 3, 2022 [/PRNewswire/](#) -- DaVita Clinical Research (DCR) will highlight its latest research during the American Society of Nephrology (ASN) Kidney Week, being held in Orlando from November 2-6, 2022.

"We look forward to Kidney Week as a crucial inflection point to socialize new discoveries and advancements that are changing the lives of patients," said Dr. Steven Brunelli, vice president of health economics and outcomes research for DaVita. "We're thrilled to present several highlights from our research team that have been formative in our strategy to deliver holistic care to patients at every stage and setting of the kidney care journey."

This year's posters and presentation titles include:

- Preferences for End-of-Life Care Among Dialysis Patients: A Discrete Choice Experiment
- Relationship Between Driving Time to Transplant Center and Socioeconomic Factors with Early Waitlisting Among Transplant Referred End-Stage Kidney Disease Patients
- Temporal Relationship Between Prior Estimated Glomerular Filtration Rate Testing and Dialysis Initiation in Real-World Population of Incident Dialysis Patients
- End-of-Life Care Planning Among Dialysis Patients: A Mixed-Methods Study
- Opportunities to Leverage Personal Networks to Increase Living Donor Kidney Transplant
- Barriers to "The Big Ask" and Opportunities to Increase Living Donor Kidney Transplant Among Dialysis Patients and Care Givers
- Better Anti-Spike IgG Antibody Response to SARS-CoV-2 Vaccine in Patients on Hemodiafiltration Than on Hemodialysis

In developing the new [Chronic Kidney Disease \(CKD\) and Rare Disease Network](#), DCR harnessed growing patient and physician interest in joining hybrid and decentralized trials, increasing the geographic, socioeconomic and racial diversity of the research population. As more physician practices join DaVita's CKD-focused EHR, the opportunity to leverage that platform of technology to support data-driven recruitment increases, as do novel ways to centrally manage and operationalize clinical trials. These technology advances, along with expert support, expand the opportunity to reach an even greater audience to research and introduce new treatment options. More information is available [here](#).

DaVita representatives will be available to discuss the research as well as collaboration opportunities in the Kidney Week exhibit hall, including the CKD & Rare Disease Network.

ASN Kidney Week 2022 will convene more than 15,000 kidney care professionals from around the world in a hybrid (virtual and in-person) format to discuss advancements in the field of nephrology.

ASN will also make a virtual experience available at <https://www.asn-online.org/kidneyweek>. Content, including posters and abstracts, will be available online.

DaVita will share updates throughout the meeting on Twitter on both @DaVitaDoc and @DaVitaResearch and will also join the conversation using #KidneyWK.
