Superior Patient Clinical Outcomes Confirms DaVita's Leadership Position on Quality Dialysis Care

Outcomes data confirms that the risk of mortality faced by patients at DaVita facilities may be 8% lower than the national average

PRNewswire-FirstCall
EL SEGUNDO, Calif.

DaVita Inc., a leading provider of kidney care services for those diagnosed with chronic kidney failure and disease (CKD), significantly exceeds national averages with regard to patient quality, as validated by both the Clinical Performance Measures Report published in 2006 by the Centers for Medicare and Medicaid Services (CMS), and the December 2007 Fistula First Vascular Access Improvement Initiative. This achievement is notable among the nation's kidney care community because DaVita® serves more than 1-in-4 dialysis patients in America.

"At DaVita, our highest priority is the health and well-being of the more than 100,000 patients cared for by our professional partners and teammates," said Kent Thiry, CEO of DaVita. "We're pleased that this commitment has once again been validated by the findings from CMS."

Research studies show that patients who meet all four of the CMS Clinical Performance Measures (CPM) and the National Kidney Foundation's (NKF) Kidney Disease Outcomes Quality Initiative (KDOQI) achieve the lowest mortality.(a,b) Outcomes data confirms that the risk of mortality faced by patients dialyzed at DaVita facilities may be as much as 8% lower than the national average.

DaVita consistently surpasses national averages for CMS CPM and KDOQI outcomes. Most recently, DaVita outperformed the national averages by as much as 44% on four key clinical performance outcomes. A recent study that compared the mortality trends for the major dialysis providers found that DaVita had a significant improvement in survival compared to non-chain facilities.(c)

Performance Indicator	DaVita	National Average	DaVita % Favorable to the National Average
Kt/V < 1.2 (lower is better)	5% (1)	9% (2)	44% improvement
Fistula In Use	50.0% (1)	48.5% (3)	3% improvement
Albumin < 3.5 g/dL (lower is better)	18% (1)	20% (2)	10% improvement
Mortality (lower is better)	17.0%	18.6% (4)	8.6% improvement

"An important part of measuring and tracking our clinical performance is through the DaVita Quality Index, or DQI," explained Dr. Allen Nissenson, DaVita Chief Medical Officer. "The DQI focuses on the performance of seven key clinical parameters, giving physicians a snapshot of how the patients in their clinics are performing. We have seen a clear correlation over the past

five years of using the DQI that as overall DQI scores improve, overall mortality decreases."

"By focusing on clinical training and continuous quality improvement, we are able to partner with nephrologists," said Robertson. "As a doctor still in practice myself, I want my patients to feel their best and enjoy their lives. DaVita's tools and teammate training help me reach these goals."

About DaVita Inc.

DaVita Inc., a FORTUNE 500® company, is a leading provider of kidney care in the United States, providing dialysis services and education for patients with chronic kidney failure and end stage renal disease. DaVita manages more than 1,300 outpatient facilities and acute units in more than 700 hospitals located in 43 states and the District of Columbia, serving approximately 107,000 patients. As part of DaVita's commitment to building a healthy, caring community, DaVita develops, participates in and donates to numerous programs dedicated to transforming communities and creating positive, sustainable change for children, families and our environment.
