

Approximately 1 in 3 Adults with Diabetes May Develop Chronic Kidney Disease

DaVita raises awareness about link between diabetes and CKD during National Diabetes Awareness Month

DENVER, Nov. 1, 2018 /PRNewswire/ -- [DaVita Kidney Care](#), a division of DaVita Inc. (NYSE: DVA), a leading provider of kidney care services in the United States, today acknowledged National Diabetes Awareness Month by highlighting the link between diabetes and chronic kidney disease (CKD).

"Diabetes is imperative to monitor and control, as it's the number one cause of CKD. We encourage everyone to educate themselves, schedule routine check-ups, maintain a healthy diet and refrain from smoking to lower the risk of developing kidney disease with diabetes" said Dr. David Roer, vice president of medical affairs at DaVita.

Diabetes is a disease that affects the body's ability to produce or use insulin. If the body produces little to no insulin, too much sugar—or glucose—remains in the blood. The higher than normal glucose levels can result in either Type 1 or Type 2 diabetes.

Kidney disease occurs when the kidneys are no longer able to clean toxins and waste product from the blood and perform their functions to full capacity. Diabetes and kidney disease are linked because high blood glucose can damage the blood vessels in kidneys. In fact, according to the Centers for Disease Control and Prevention, approximately [1 in 3 adults](#) with diabetes may develop chronic kidney disease.

However, there are several ways to help manage diabetes and kidney disease. Maintaining a kidney-friendly diet that's low in potassium, phosphorus and sodium may help. Make sure to consult a dietitian regarding tips for accurately measuring a serving size. What may be measured as one serving on a regular diet may count as several servings on the kidney diet.

DaVita also offers hundreds of healthy recipes through the [DaVita Diet Helper](#), an easy-to-use online meal planning tool for those with diabetes and kidney disease. DaVita Diet Helper™ offers a Dining Out Guide, Fluid Tracker and ability to create a personalized shopping list.

Additionally, DaVita has multiple collections of kidney-friendly cookbooks. The most recent edition is "Today's Kidney Diet: Fall Comfort Foods." Each recipe is tailored to those with kidney disease, but can easily be adapted for those with other comorbidities, such as diabetes. To download DaVita's the fall cookbook and others for free, visit [DaVita.com/FreeCookbook](#).
